Q1:

(B)

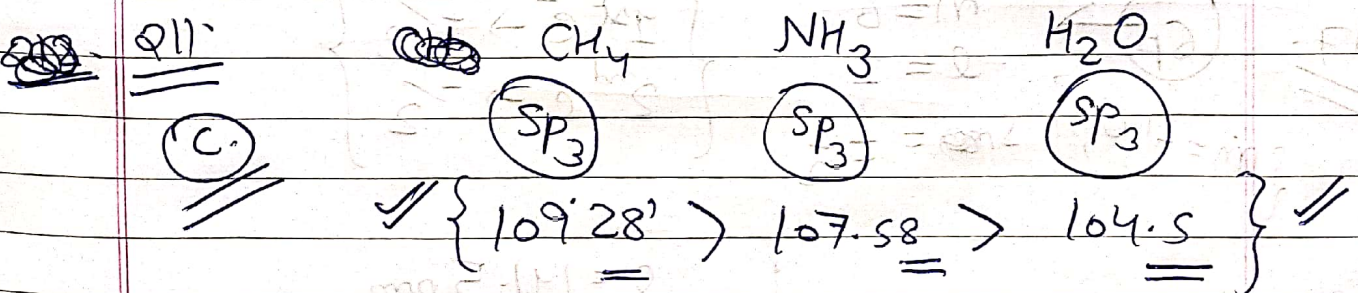

Q3. (C)

Q4. (C)

Q8. 7

{ Pd }  
Pd  
mg

Q12. (a)

Q13. (b)  $\text{NH}_3 \rightarrow \text{sp}_3 \rightarrow$  Tetrahedral but Trigonal Pyramidal

Q14.  $\text{SO}_3 \rightarrow \text{sp}^2$  (a)

<u>orbit</u>	<u>orbital</u>
$\Rightarrow$ Planar (2D) repres. of $e^-$	$\Rightarrow$ 3D motion of $e^-$ around nucleus
$\Rightarrow$ Path established	$\Rightarrow$ Probability to find $e^-$ is max.
$\Rightarrow$ well defined $\rightarrow$ against Heisenberg's	$\Rightarrow$ agrees with theory of Uncertainty.
$\Rightarrow$ Shape is not well defined	$\Rightarrow$ directional by nature. So shapes can be found out.

Q17.  $\text{6p} \rightarrow$   $m=6$   
 $l=1$   
 $\{m=-1, 0, 1\}$   $s_{\text{max}} = \pm \frac{1}{2}$

$\left\{ \begin{array}{l} 1^{\text{st}} e^- \rightarrow +\frac{1}{2} \\ 2^{\text{nd}} e^- \rightarrow -\frac{1}{2} \end{array} \right\}$

Q18.  $P = 0.827 \text{ D}$  |  $l = 141.5 \text{ pm}$   
 $1 \text{ D} = 3.336 \times 10^{-30} \text{ cm}$

$$0 | Pm = 10^{-12} m = 10^{-10} cm$$

$$1 m = 10^2 cm$$

DATE: / /

PAGE NO.:

$$P = Q \times l \Rightarrow Q = \frac{P}{l} = \frac{0.827 \times 3.336 \times 10^{-30}}{141.5}$$

$$\Rightarrow \frac{0.827 \times 3.336 \times 10^{-36}}{141.5 \times 10^{-10}}$$

$$\Rightarrow \frac{827 \times 3336 \times 10^{-6} \times 10^{-36}}{141.5 \times 10^{-10}}$$

$$\Rightarrow \frac{827 \times 3336 \times 10^{-32}}{1415}$$

$$\Rightarrow 1.94$$

Q19. octet rule  $\rightarrow$  Demerits:  $\rightarrow$  No idea about shape  
 $O_2 \rightarrow$  should be dir. accordingly  $\rightarrow$  only for atoms in ground state

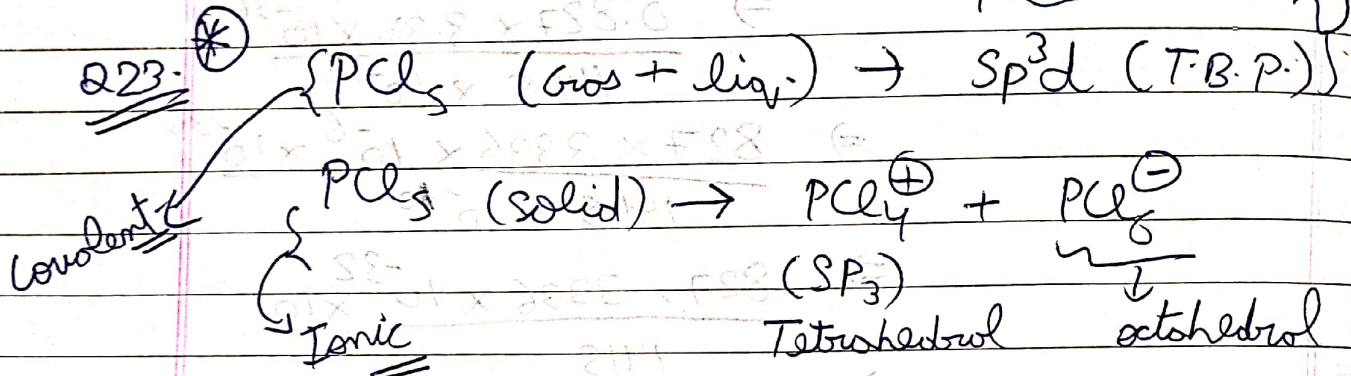

Q20.  $BeF_2$   
 $\hookrightarrow 4e^- \rightarrow$  hypovalent

$PF_5$   
 $\hookrightarrow 10e^- \rightarrow$  hypervalent

Q21: <sup>21</sup> Yes, Expansion of orbitals.

Q22: No, it cannot be shown.  $sp^2$   $pd$  more  $\pi$  bond in  $sp^2$  state

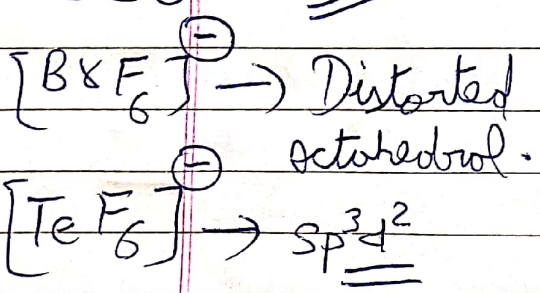

Q24:

Q25:

Effective Back bonding

As  $Cl^-$  is more electronegative ~~more~~ its able to contact with phosphorous d-orbital and form  $PCl_5$  molecule. Whereas in  $PH_5$  H as less electronegativity and hence it cannot contact phosphorous 3-D orbital to form  $PH_5$  molecule

Q26:
